Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13,23-35, drawn to an audio/video generation apparatus, comprising an audio and/or video generation device operable to generate audio and/or video material, and a metadata generation processor operable to generate metadata describing the content and/or attributes of the audio/video material, wherein the metadata generation processor is operable to generate a reference value providing a quasi-unique reference to the audio/video material with a reduced amount of data than the audio/video material itself, classified in class 382, subclass 276.
 - II. Claims 14-22, drawn to a data structure comprising a volume identification defining the data carrier on which the audio/video material is represented, at least one shot identification defining the at least one shot or sub-shot within the audio/video material, and metadata including a quasi-unique reference value associated with the shot identification, the quasi-unique reference being generated from the audio/video data within the shot or sub-shot, classified in class 707, subclass 102.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination

is separately usable. In the instant case, subcombination I has separate utility such as an audio and/or video generation device operable to generate audio and/or video material, and a metadata generation processor operable to generate metadata describing the content and/or attributes of the audio/video material, wherein the metadata generation processor is operable to generate a reference value providing a quasi-unique reference and subcombination II has a separate utility such as a data structure. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and the search required for group I is not required for the other group, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes is proper.

A telephone call was made to Mr. Bradley D. Lytle, Registration Number 40,073 on June 2, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made. Applicant requested restriction to be mailed.

An election, with or without traverse, must be made by the Applicant in replying to this restriction requirement.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
